

Dual connectivity ECG systems allow you to provide necessary care – even in tough situations

Resting EKG or **Resting ECG** as it is commonly referred to, is a test that is used by medical professionals to find out whether a patient is at the risk of a heart attack or another heart disease. These tests are done to measure a patient's heart activity. Treatments are suggested based on the findings. A **Stress EKG** test would gauge how your heart responds to external stress. These tests are conducted in a controlled clinical environment and the external stress is induced either by IV pharmacological stimulation or exercise. Doctors conduct these tests on patients who are complaining of symptoms like chest pain. These tests help doctors to gauge the working of your heart and whether it has a problem that needs to be dealt with.

It is very important for doctors and other medical professionals to have the right equipment for conducting these tests. If you want to provide better care to your patients, you need stress EKG or ECG devices that are more efficient and come with quicker response times. You need a 12-lead fully interpretive ECG system that gives you the freedom to choose the technology that you want to use for conducting the tests based on your needs, environment, and location. There are times when you don't have access to the technology that traditional ECG systems work on. So, an alternative that provides you easy access to other technologies for measuring heart activity will certainly help you better patient outcomes. Nasiff Associates' CardioCard PC Based Dual Stress and ECG System is the perfect solution for this problem.

This **Dual Connectivity ECG System** allows medical professionals the ability to perform ECG testing using Bluetooth and USB technology from the same device. You don't need to buy another device. Just the addition of this dual system will help you conduct tests even when you don't have access to the technology that traditional ECG systems need.

With this Dual Connectivity ECG System, you can now connect directly with your Emergency department to make them review the test readings, and prepare the EMR staff before the patients even reach the facility. This device provides you the ability to deal with a cardiac emergency and rush your patient quickly to the emergency room. The system comes with the features, quality, and benefits that you have come to associate with products from Nasiff Associates. **Plus, if you purchase this product, you will get a free Windows tablet as a gift.**

About Nasiff

Founded in 1989, Nasiff Associates is a medical technology company and leader in diagnostic cardiology medical devices including ECG/EKG devices and systems. The first company to produce a clinically useful PC-based CardioResting™ ECG, PC-based CardioStress™ (Stress ECG), CardioHolter™ (Monitor), CardioSuite® ECG System (all-in-one cardiology system consisting of Resting, Stress and Holter) and CardioVitals™. All products are developed and manufactured in the USA to maintain top quality control and unsurpassable customer care. All systems come complete with the Cardio Universal EMR Interface™. More information about Nasiff products can be found at www.nasiff.com.
