

UNIVERSITY OF WISCONSIN
WHITEWATER

To Whom It May Concern:

In the Human Performance Laboratory at the University of Wisconsin we have used successive generations of Nasiff PC based systems for testing of clients, patients and research subjects for nearly two decades. Throughout that time we have always had five systems, including one for each of four identically equipped stations used for testing and teaching and one for a high-end station used for research and more sophisticated testing. We were pleased with our original equipment and each successive generation has brought significant advancements in line with the continuing development and advancing capabilities of computer technology. We have experienced relatively few problems with our Nasiff PC based systems and those problems have been quickly corrected – usually within 48 hours. Their customer service has been outstanding. The Nasiff PC based systems have been ideal for our Human Performance Laboratory.

I would be pleased to respond to questions by e-mail at albrechs@uww.edu or mobile at 608-719-9316.

Sincerely yours,

Steven J. Albrechtsen, Ph.D.
Professor Emeritus and Director Emeritus
Human Performance Laboratory

P.S. I recently retired from the University of Wisconsin, but I am still professionally active and happy to recommend Nasiff Associates and their products
